

CELL MANUFACTURING

Stored energy can turn a fault into a fire.

You make battery cells or packs where chemical states and electrode processing create high-energy fire and injury risks.

RISKS WORTH DISCUSSING

- 01 Thermal runaway fire propagation
- 02 Solvent and electrolyte ignition
- 03 Field failures and recalls

Coverage worth discussing

Products liability

Third-party injury from covered battery failures.

Environmental liability

Helps with cleanup costs for electrolyte releases.

Commercial property

Covers facility and stock against fire from runaway.

Equipment breakdown

Covered failures of formation or coating equipment.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
