

COKE OVENS AND QUENCHING

Coke-oven gases can fuel an explosion.

Your coke processing unit uses extreme heat to drive off volatiles, which creates fire, explosion, and combustible dust risks during production cycles.

RISKS WORTH DISCUSSING

- 01 Coke oven gas fire exposure
- 02 Combustible coal dust deflagration
- 03 Oven and conveyor mechanical breakdown

Coverage worth discussing

Commercial property

Insured ovens and structures after covered physical damage.

Environmental liability

Covered pollution claims from accepted processing releases.

Equipment breakdown

Covered internal failures of accepted processing machinery.

Products liability

Covered resulting harm from supplied coke.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
