

ORGANIC PILES, FEEDSTOCKS AND COMPOST

A self-heating pile can catch fire.

You process organic feedstocks into compost. Declare pile storage, accepted materials and product use; fire damage, odor/leachate cleanup and resulting customer crop harm differ from replacing your own batch.

RISKS WORTH DISCUSSING

- 01 Fire in self-heating organic piles
- 02 Odor or leachate affecting neighbors
- 03 Customer crop harm from sold compost

Coverage worth discussing

Environmental liability

Cleanup under accepted odor/runoff release terms.

Equipment breakdown

Internal failures of accepted grinders/turners.

Workers compensation

Benefits for qualifying processing work injuries.

Commercial property

Insured facilities and expressly accepted stock.

Products liability

Resulting crop/soil harm under accepted product terms.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
