

ELECTRICAL WIRING

A wiring defect may surface after handoff.

Conductors and concealed connections must perform after the building is occupied. Review your load-calculation duties and completed installations, along with employee shock exposure and the meters you carry.

RISKS WORTH DISCUSSING

- 01 Fire from faulty wiring
- 02 Shock and arc-flash injuries
- 03 Design and load-calculation errors

Coverage worth discussing

General liability

Helps with covered third-party fire or shock claims after project completion.

Professional liability

Assists with covered claims arising from wiring design or load errors.

Commercial auto

Supports road-accident claims for vehicles serving job sites.

Workers compensation

Provides benefits for crews injured in electrical or overhead incidents.

Inland marine

Helps protect expensive testing gear against theft during transportation.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
