

RAW GAS TREATMENT AND NGL RECOVERY

Pressurized hydrocarbons can fuel a plant fire.

You treat wellhead gas and recover liquids using fractionation trains. Pressurized hydrocarbons create fire risks and potential downstream product-liability claims.

RISKS WORTH DISCUSSING

- 01 Fire in pressurized process units
- 02 Toxic H₂S release from feed gas
- 03 Equipment breakdown and plant shutdown

Coverage worth discussing

Commercial property

Insured processing units after covered physical damage.

Environmental liability

Covered cleanup from accepted processing releases.

Workers compensation

Work-injury benefits for eligible processing employees.

Equipment breakdown

Covered internal failures of accepted processing equipment.

Products liability

Covered resulting harm from supplied gas products.

Umbrella liability

Extra limits above expressly covered underlying liabilities.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
