

SOLAR ELECTRICITY GENERATION SITE

One storm can damage many solar panels.

You operate arrays, inverters and grid connections. Weather damage, internal failures and stolen components create different repair costs and generation-interruption questions.

RISKS WORTH DISCUSSING

- 01 Weather damages widespread arrays
- 02 Inverters or transformers fail
- 03 Remote stock stolen or damaged

Coverage worth discussing

Commercial property

Insured arrays and racking after covered physical damage.

Inland marine

Declared solar shipments during accepted transit stages.

Equipment breakdown

Covered internal failures of accepted inverters or transformers.

General liability

Covered site claims from accepted solar operations.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
