

ROBOTIC SCIENTIFIC MISSION DEVELOPMENT

Navigation errors can derail a scientific mission.

You design robotic spacecraft using software and prototypes. Ground engineering, launch hardware and lost mission value need distinct accepted terms.

RISKS WORTH DISCUSSING

- 01 In-flight software navigation flaws
- 02 Fragile prototype lab destruction
- 03 Theft of mission data designs

Coverage worth discussing

Professional liability

Eligible claims from accepted engineering services.

Commercial property

Insured laboratory fixtures after covered physical damage.

Cyber liability

Covered response or restoration involving mission designs.

Products liability

Covered third-party harm under accepted hardware terms.

Inland marine

Declared instruments on expressly accepted transit legs.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
