

WIND TURBINES AND GRID CONNECTIONS

A failed gearbox can interrupt generation.

You manage wind turbines requiring specialist technicians and crane access, where component failures and electrical connections impact generation and site safety for everyone.

RISKS WORTH DISCUSSING

- 01 Gearbox or generator failure
- 02 Nacelle fire or blade damage
- 03 Substation transformer connection failure

Coverage worth discussing

Equipment breakdown

Covered internal failures of accepted gearboxes or transformers.

General liability

Covered third-party harm from accepted wind-farm duties.

Workers compensation

Work-injury benefits for eligible height or electrical crews.

Commercial property

Insured towers or blades after covered physical damage.

Inland marine

Declared turbine components during accepted transit stages.

Coverage is subject to policy terms and exclusions.

Why The Southern Agency

01 Listen

We review your operations, coverage and past claims.

02 Assess

We look at hazards and ways to reduce risk.

03 Build

We compare carriers, premiums and audit terms.

04 Support

We revisit coverage as your work changes.
